

## HLTH 147 | QUIZ 15 OF 29 (Lecture 20)

NAMES \_\_\_\_\_

**What is the sequence of *incoming* cells involved in healing (put these four cells in order: Macrophages, neutrophils, platelets, fibroblasts).**

**What's a cytokine?**

**You're hit by a pitch. Or you break a bone. Or you sprain your ankle. Do these injuries go through different courses of healing? Yes or no?**

**The ankle sprain happened. It wasn't terrible, but it's definitely sprained. How quickly should you get inflammation in and out of the tissue?**

**How do neutrophils clean tissue?**

**What are complement proteins? What are opsinins?**

**What cells trigger the influx of fibroblasts? What do fibroblasts adhere to? What do fibroblasts synthesize?**

**Collagen I and Collagen III: what comes first? And what's the difference?**

**How would you characterize an ideal healing environment?**

**What's myositis ossificans?**
